DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Huang et al. (US 6,308,282 B1).

Huang teaches the switch with the channel fault unit (column 14, line 39, "Failure Recovery Channel Swap Mode") and the switch fault unit (column 15, line 1, "Failure Recover: Device Swap Mode").

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goto (JP2000307605A).

Goto teaches the method for generating a fault message (See English Abstract-Solution). Goto does not teach a switch or process fault. Goto's system is for use in Network Management. A skilled artisan would have been motivated to incorporate Goto's system to

monitor devices associated with a network, wherein switches and processors are known devices in a network. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to monitor a switch or processor with Goto's system for the reason that a network devices are known to include switches and processors.

Allowable Subject Matter

5. Claims 5-11 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to anticipate or make obvious the network and processor fault communicating on separate pathways and isolating a nic or switch fault in response to both fault information.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melvin Marcelo whose telephone number is 571-272-3125. The examiner can normally be reached on Mon-Fri 8:30-5:00.
